Marzet Khatit
Junior Frontend Developer

I'm a junior frontend developer with a strong background of over four years in IT support and a Bachelor's degree in Information Systems and Technology. My professional experience includes technical support, customer care, conflict resolution, problem solving. Helping end users with software and troubleshooting network issues. During my internship and coursework I made a commercial website along with my fellow student. I got a "Responsive web design" certificate. I am currently working in tech support and learning JavaScript and React by myself. I believe that my skills and experience make me an excellent candidate for the frontend developer position.
